

MY EXPERIENCE IN THE LCC BAS-OLTM PROGRAM

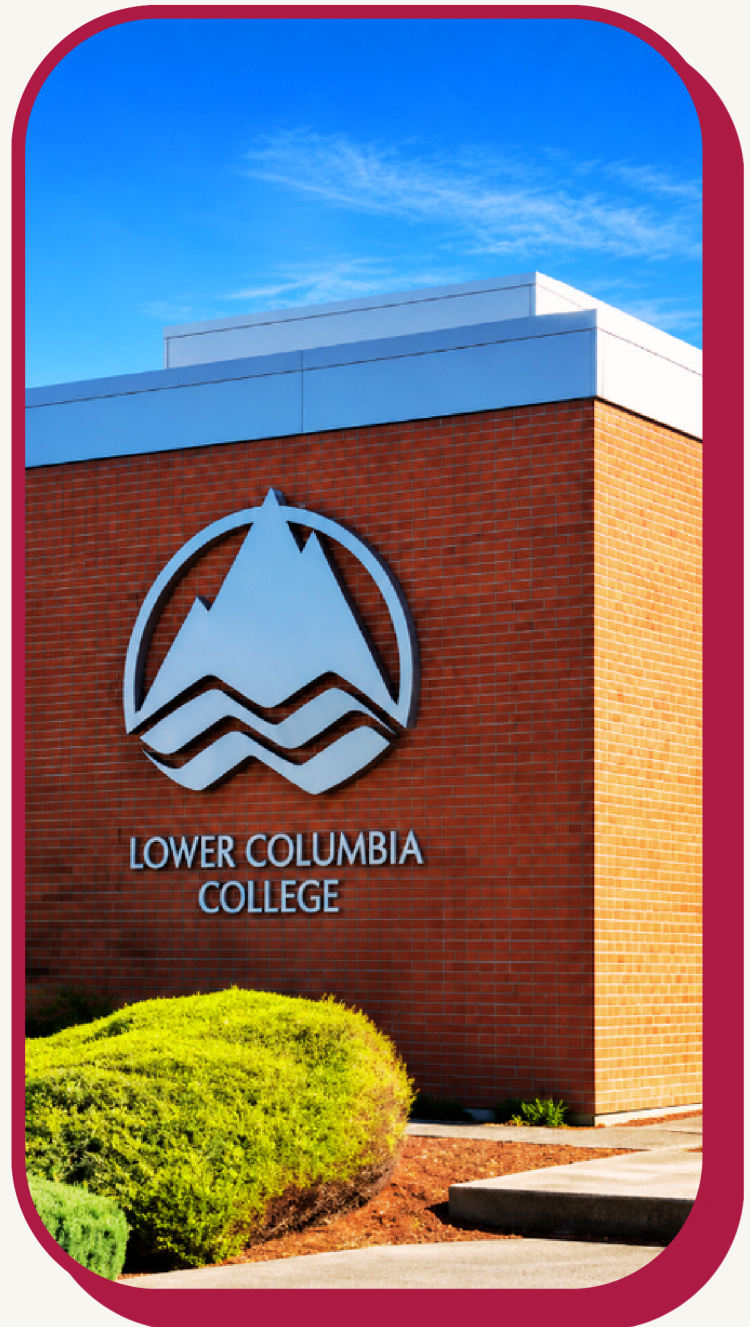

INTRODUCTION

Pursuing my Bachelor of Applied Science in Organizational Leadership and Technical Management at Lower Columbia College has been a meaningful part of my personal and professional growth. The program strengthened my understanding of leadership, communication, teamwork, and project management, while also helping me learn more about the kind of leader I want to be. This experience has challenged me to think critically, collaborate effectively, and lead with greater confidence, empathy, and purpose.

One of the most valuable parts of the BAS-OLTM program has been the opportunity to apply leadership concepts in practical ways. Through group projects, presentations, reflections, and service-based work, I have learned that effective leadership is not only about guiding others toward a goal, but also about creating an environment where people feel supported, included, and empowered. These experiences helped me recognize the importance of adaptability, active listening, and shared accountability in both personal and professional settings.

WHY I CHOSE THE BAS-OLTM PROGRAM

I chose the BAS-OLTM program because I wanted to become a stronger, more intentional leader who could better support others in reaching their goals. I recognized areas where I needed to grow and saw the program as a structured way to build both the skills and the confidence to lead with purpose.

WHAT I LEARNED & MY GROWTH

When I started college four years ago, I lacked many technical skills. Over time, I developed those skills, but I still had to build the knowledge and confidence needed to lead effectively.. Through my coursework and hands-on projects, I learned how to lead more intentionally and to focus on outcomes that empower teams rather than control them.

This program helped me discover that, even as an introvert, I really enjoy collaboration. Group projects taught me to consider different perspectives and appreciate how others' ideas can strengthen the final outcome. Working with individuals from diverse backgrounds, including through COIL (Collaborative Online International Learning) projects, deepened my cultural awareness and improved my ability to adapt my communication style.

For my Capstone project, I mentored over 200 college students, which has further developed my communication, problem-solving, and adaptability skills, and helped me support students through unexpected challenges. These mentoring experiences translated directly into project leadership by teaching me to plan more clearly, delegate with intent, and use active listening to resolve conflicts quickly.

Applying leadership skills at home has been equally important. Using skills like adaptability, active listening, and empathy has changed how I communicate with my children, family, and friends. Which reminds me that leadership is lived every day.

CLOSING REFLECTION

The BAS-OLTM program has helped shape my leadership identity into one that balances purpose, service, and relationship-building. Completing my portfolio and Capstone project gave me time to reflect on how much I have grown in skills, confidence, and self-awareness.

This program has prepared me to move forward with a stronger foundation in leadership and a clearer vision for how I want to make a positive impact in future roles and in the lives of others. It has been a meaningful journey, and I will carry these lessons forward as I pursue opportunities to make a positive impact in future roles.
